

# Package: analogueExtra (via r-universe)

October 30, 2024

**Type** Package

**Title** Additional Functions for Use with the 'analogue' Package

**Version** 0.1-2

**Date** 2019-08-26

**Depends** vegan3d (>= 0.65-0), analogue (>= 0.16-0)

**Imports** rgl

**Suggests** testthat

**Maintainer** Gavin L. Simpson <ucfagls@gmail.com>

**BugReports** <https://github.com/gavinsimpson/analogueExtra/issues>

**NeedsCompilation** no

**Description** Provides additional functionality for the analogue package  
that is not required by all users of the main package.

**License** GPL-2

**ByteCompile** true

**URL** <https://github.com/gavinsimpson/analogueExtra>

**LazyData** true

**Encoding** UTF-8

**Repository** <https://gavinsimpson.r-universe.dev>

**RemoteUrl** <https://github.com/gavinsimpson/analogueExtra>

**RemoteRef** HEAD

**RemoteSha** 70f83696afdf9428703cf6eb66589ea7346773a4

**plot3d.prcurve***Interactive 3D plot of a principal curve in principal coordinate space*

## Description

Draws a 3D plot of the principal curve in principal coordinate space using the **rgl** package and functions from **vegan3d**.

## Usage

```
## S3 method for class 'prcurve'
plot3d(x, choices = 1:3, display = "sites", scaling = 0,
        lcol = "darkorange", lwd = 2, decorate = TRUE, xlab = NULL,
        ylab = NULL, zlab = NULL, main = NULL, ...)
```

## Arguments

<b>x</b>	an object of class "prcurve" resulting from a call to <a href="#">prcurve</a> .
<b>choices</b>	numeric vector of length 3; the ordination axes to plot.
<b>display</b>	character; which scores to display. See <a href="#">scores.rda</a> .
<b>scaling</b>	numeric; the scaling to use for the scores. Default is no scaling.
<b>lcol, lwd</b>	The colour and width, respectively, for the principal curve.
<b>decorate</b>	logical; should the plot be decorated with bounding box, axes and labels?
<b>xlab, ylab, zlab, main</b>	Labels for the plot.
<b>...</b>	Arguments passed to other functions. In particular, arguments are passed to <a href="#">ordirgl</a> , <a href="#">lines3d</a> , and <a href="#">decorate3d</a> .

## Value

A plot is drawn on the active RGL device. If there is no active RGL device, one is opened upon plotting.

## Author(s)

Gavin L. Simpson

## See Also

[ordirgl](#), [prcurve](#).

**Examples**

```
## Only works if the analogue package is available
if (require("analogue")) {
  ## Load the Abernethy Forest late glacial pollen sequence
  data(abernethy)

  ## Remove the Depth and Age variables
  abernethy2 <- abernethy[, -(37:38)]

  ## Fit the principal curve using the median complexity over
  ## all species
  aber.pc <- prcurve(abernethy2, method = "ca", trace = TRUE,
                      vary = FALSE, penalty = 1.4)

  ## 3D plot of data with curve superimposed
  ## plot3d.prcurve(aber.pc) # now deprecated, instead use
  plot3d(aber.pc)
}
```
